Dread Claws Warlock — Leveling

Season: Season 13 - Season of Reckoning **Tier:** S | **Build ID:** `sf1n6g0v` | **Fetched:** 2026-05-03 11:45 UTC

> *Source of truth: Maxroll. The ranked damage breakdown below is build-specific.*

Variant comparison — picked: Midgame

Maxroll's planner ships several progression variants per build. We score each on three heuristic axes (Damage / Survive / Sustain, 0-100, *between-variant comparison only*) using item power, world tier, gear-slot count, and unique-item count. The best composite wins — that's the variant detailed in this report.

Variant	Lvl	wTier	Slots	Uniques	Avg pwr	Damage	Survive	Sustain	Composite
Midgame ◀	70	8	17	5	871	100.0	100.0	100.0	**100.0**
Endgame	70	8	17	5	876	100.0	100.0	100.0	**100.0**
Starter	70	8	16	0	844	57.1	96.2	97.1	**76.8**
(Maxroll Leveling Guide Skills)	70	8	13	0	623	42.5	85.8	89.3	**64.9**
1-70 Leveling	70	8	13	0	623	42.5	85.8	89.3	**64.9**

Composite = 0.5·Damage + 0.3·Survive + 0.2·Sustain. The "Skill Progression" variant scores 0 because it carries no gear — it's a documentation aid, not a playable loadout.

Point allocation order

Spend skill points in this order. By the end of each step, your cumulative point count should match the listed total.

Step	Milestone	Points added	Total points	Active nodes
1	**lvl 4 Core**	+3	3	3
2	**lvl 9 Eviscerate**	+5	8	8
3	**lvl 13 Sigil**	+4	12	12
4	**lvl 15 Main Variants**	+2	14	14
5	**lvl 23 Infiltration Trails**	+8	22	19
6	**lvl 34 Recall Shadows**	+11	33	20
7	**lvl 34 Respec Fallen + Prison**	+0	33	20
8	**lvl 40 Meta instead of Laalish**	+6	39	24
9	**lvl 53 Full Meta**	+13	52	24
10	**lvl 67 Nether Step**	+14	66	24
11	**lvl 70 All Points**	+17	83	24

Note: D4's skill tree gives 1 point per level (1-50), so the final total here is the cap you'll hit at level 50.

Click-by-click skill-point allocation

If a row shows just `node \` nnnn`` without a name, the resolver couldn't find the SkillKit entry — open the planner URL in section 8's footer and verify visually.

Specific nodes activated per step

Names resolve via d4data's `SkillKit/<class>.skl.json`, walking the `arNodes` map from planner node ID → power codename → humanized label. Format: `<Skill> [— Upgrade N] (<Cluster>)`. Verify visually against the planner UI: `https://maxroll.gg/d4/planner/sf1n6g0v`.

Crafting workflow per slot — affix-hunting cheatsheet

Use this as the loop you run at every gear upgrade. Items go through 4 stages: **loot/gamble → reroll → temper → masterwork**.

1. **Loot or gamble** an item with the right slot at item-power 800 or higher.
2. **Inspect rolls.** Keep if it has at least 2 affixes from the slot's top-3 priority list and one socket. Otherwise salvage and try again.
3. **Reroll at the Occultist** (60-80M gold per slot is normal) — target the 4th affix to match the priority list.
4. **Temper** at the Blacksmith using the recommended manuals.
5. **Masterwork** to +12 — every 4th rank (4, 8, 12) rolls a +25% to a random affix. Use these to amplify the priority target.
6. **Greater Affix** (gold-bordered) on a top-priority stat is worth ~5x — keep an eye out and don't reroll those off.

Slot	Top 3 affixes	GA priority	Tempering manuals	Masterwork target
`helm`	Cooldown Reduction, Maximum Life, Total Armor	Cooldown Reduction	Class skill rank: pick the manual matching your build's primary skill; Defensive utility: Armor% or Life% manual, whichever you're missing	Cooldown Reduction
`chest`	Damage Reduction, Damage Reduction from Distant, Maximum Life	Damage Reduction	Class skill rank for a defensive skill (Ice Armor / Iron Skin / Bone Storm equivalent); Damage Reduction temper if available	Damage Reduction
`offhand`	Lucky Hit Chance, Cooldown Reduction, +Ranks to skills	Lucky Hit Chance	Cooldown Reduction temper; Lucky Hit utility temper	Cooldown Reduction
`weapon_1h_a`	Damage to Close, Damage to Distant, Vulnerable Damage	Damage to Close	Damage-vs-state matching your build (Burning / Bleeding / Frozen / etc.); Crit Strike Damage temper	Vulnerable Damage
`gloves`	Critical Strike Chance, Attack Speed, Lucky Hit Chance	Critical Strike Chance	Core skill rank for your damage skill; Attack	Critical Strike Chance

4. Stat Priorities

(stat priority section not extracted in this version — refer to source guide)

---

5. Damage breakdown — what actually carries this build

Dominant bucket: `vulnerable`

Bucket	Contribution
vulnerable	30.5%
additive	18.6%
skill_tag	14.4%
crit	12.7%
conditional	8.5%
overpower	6.8%
other	5.1%
resource	3.4%

Heads-up on the 'Crit is king' assumption. In current Diablo IV, total damage is computed roughly as `base * (1 + ADDITIVE_TOTAL) * VULN[x] * CRIT[x] * OVERPOWER[x] * SKILL_TAG[x] * CONDITIONAL[x]`. Crit is one fixed multiplicative bucket among several. Whether Crit is actually the biggest contributor depends entirely on how saturated each of the other multiplicative buckets is in *your* build — and in most meta builds, Vulnerable and skill-tag multipliers contribute more than Crit because they're easier to stack to high values.

For this **Dread Claws Warlock** build, the dominant damage bucket is likely **Vulnerable [x]**. That means: when comparing affixes/aspects/paragon nodes, prefer ones that add to that bucket *over* ones that add to already-saturated buckets. Pure +X% additive damage rolls add to a bucket that's typically already at +500-700% in endgame; a single +20% in a starved multiplicative bucket can be worth more than a +60% additive roll.

(Per-affix marginal-analysis numbers will appear here once d4data integration is complete — this v1 prose reflects the published meta consensus for this archetype.)

6.5. Most important tasks to complete (from Maxroll guide)

Class Mechanic — Soul Shards *(unlock at lvl 15)*

At level 15, you can unlock your class mechanic called Soul Shards, with a secondary option called Fragments at level 30.

Mastermind Shard unlocks Laalish for free but more importantly grants synergies for Abyss and Shadowform (generated by Nether Step , Sigil of Subversion), boosting most of our damage sources.

Blasphemous Fragment further builds into that by allowing Rampage - Abyssal Titan to apply Hex , amplifying all Abyss damage even further.

Learn more details and how to unlock this system in our full Warlock Class Overview .

Gear & Stat Priorities Season 13 - Season of Reckoning Dread Claws Warlock

To get started as a Dread Claws Warlock, focus the most on upgrading your weapon, as its damage is the base for all further damage calculations. Otherwise, follow the priority list below. While you don't have all of the desired temper manuals available, simply try to get anything useful on your gear until you acquire the right ones. For example, % Damage, Damage to Close, Vulnerable Damage, etc. all work as long as you activate their conditions. Likewise, you can temper multiple defensive options, such as Resistances, Life, and Armor, to fill gaps in your survivability. Tempering low level gear is relatively cheap, and the results can be very impactful.

Campaign route

For your first character in Diablo 4, completing the base & VoH Campaigns provides all the background lore but is not necessary. The original Campaign is the slowest way to level, but it's worth experiencing Diablo 4's storyline at least once. The Vessel of Hatred campaign offers a much faster leveling experience and is also recommended at least once to see the story. Both legacy campaigns can be skipped if you want to jump straight into the latest content. The Lord of Hatred campaign is required to unlock War Plans and the full campaign skip for future playthroughs. For a faster pace, stay on Normal difficulty. To play Seasonal Content , you often need to have completed or skipped the Campaign. After finishing the campaign, you should focus on War Plans activities such as Helltides , Undercity of Kurast , or the Pit . Strongholds provide a significant boost of experience for little time investment. Make sure to clear all of them after around level 60.

Seasonal / Alt route

If you have never done so, first complete the Lord of Hatred campaign. If available, begin with the Seasonal Questline in order to progress your Season Rank to unlock additional perks, loot, and work on your Seasonal Perks. Preferably, stay on Hard difficulty or above to benefit from the extra XP multipliers as long as your clear speed remains fast. Use power jumps (e.g. key skill unlocks, legendary drops) to bump up the difficulty. From level 1-70, you should focus on earning experience in War Plans activities to work on your activity trees. Ideally, focus on Helltide , Pit , and Undercity objectives, as well as Infernal Hordes and Nightmare Dungeons for a fast and smooth experience. Strongholds provide a significant boost of experience for little time investment. You can clear all of them after around level 60 to speed things up. If you're playing an Alt, make sure to use Tempers and Imprints as soon as you acquire rare gear to crank up the difficulty. Find the most efficient way of leveling your character in detail with our Speed Leveling Guide .

Tips & tricks

Imprint Important Aspects on Amulet Ideally, put your best Offensive Aspect on your Amulet, since it is usually not replaced as often as other gear. Compare Your Items Press Shift to activate item comparison. Use this build guide's Stat Priorities section to identify potential upgrades. Choose an Easy Difficulty Ideally, start on Normal or Hard difficulty for the extra XP modifier, then try to go higher when it's way too easy. If that slows you down noticeably, it's better to stay on a lower difficulty. Use Your Materials There's no point in holding on to your gold or materials for later. Use everything to speed up your journey to 70. If you're twinking, make sure to temper and imprint your gear with powerful options to make leveling a breeze.

Speedrun route

If you're looking to min/max your time spent on the way to 70 instead of following a generic guideline, you need to use a specific strategy. This usually includes farming certain activities up to a specified level and then switching to other tasks while gathering XP in high density areas and pushing the difficulty as high as you can. We update this strategy seasonally in our Speed Leveling Guide .

Final journey to level 70

After level 40, most of the key synergies are unlocked and the gameplay loop is almost complete. As you level up, you unlock a lot of extra points that first fill up all skill ranks on your primary abilities with leftovers spent on utility skills. Check out our Warlock Endgame Builds for the next steps!

You can unlock 14 extra skill points for a total of 83. Check out our Season Rank Guide for more details.
